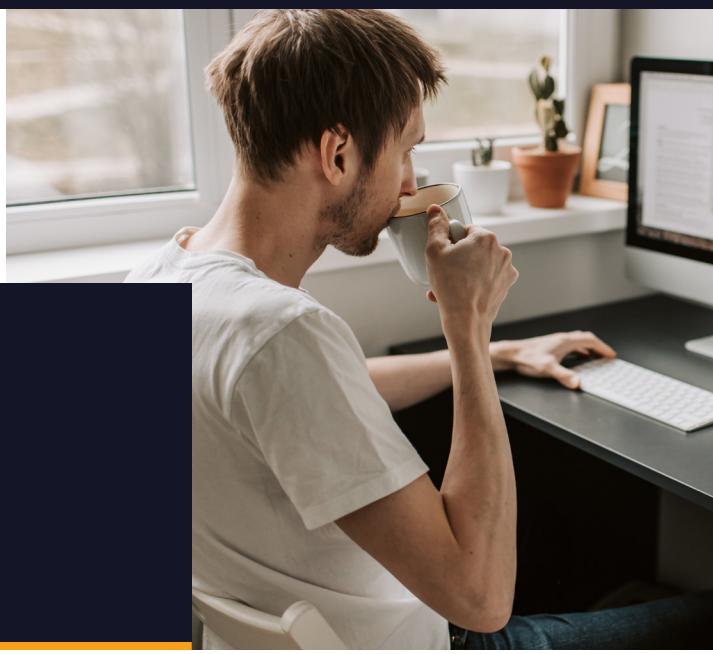
SALAMANDERLIVE™



EQUIPMENT ACCOUNTABILITY FROM HOME

As work extends beyond the traditional office, Salamander makes it easy to maintain accountability for equipment wherever it goes. Whether equipment stays on-site, is assigned to a home office, or is taken off-site for work, organizations can maintain accurate records and know **where equipment is, who has it, and how it is being used**. Regardless of type, size, or value, Salamander provides the visibility organizations need to keep their equipment accounted for.

Equipment Examples:

- Docking Stations
- Office Furniture
- Testing Equipment
- Mobile Phones
- Tablets
- Computers
- Monitors
- Display Units
- Mice
- Telephones
- Headphone Sets
- And More...

The Salamander Approach

- **Know What Equipment You Have**
  Tag ALL equipment - both big and small
- **Complete The Equipment Profile**
  Maintain a robust profile for each piece of equipment, with extensive fields to document critical details for tracking, management, and future reference
- **Know The Location Of Your Equipment**
  Set the latitude and longitude of your equipment and not only know where they are but see them plotted on the map
- **Schedule Equipment Maintenance**
  Create maintenance schedules, manage repairs, and set alerts for upcoming service needs
- **Assign Equipment To People On Issuance**
  Keep a real-time log of what has been assigned to whom so no matter where equipment is used, someone can be held accountable
- **Right Equipment, Right Place, Right Time**
  Move equipment in and out of events in real-time as it is deployed and returned
