

INVENTORY MANAGEMENT

Control Without the Complexity

Salamander's INVENTORY MANAGEMENT solution puts you in complete control with full inventory lifecycle visibility. Centralize your inventory data, empower your team with real-time accuracy, and eliminate uncertainty. Know exactly what you have, where it is, who has it, and what condition it's in at all times.

Smarter Tools for Total Inventory Visibility:

INVENTORY MANAGEMENT

Manages Fixed Assets - Have full visibility of your fixed assets that can be managed within the mobile app or online

Track Consumable Stock Levels - Easily monitor consumable levels and quickly identify when items are running low

Consumable Consumption - Decrement consumption of consumables after usage to keep a true count of your consumable inventory

Status Adjustments on Returns - As fixed assets are returned, change their status if needed to indicate that the asset is missing or needs to be worked on

REPORTING, AUDITING, & VISIBILITY

Dashboard Interface - View assigned assets with filtering capabilities to see all assigned to active and inactive people as well as assets assigned to people from a different account

Advanced Reporting - Pull reports to see every inventory transactions including available, assigned, returned, consumed, event activity, receipts, auditing, and more

Mobile Physical Auditing - Auditing inventory through the mobile app allows a true audit to happen as you are required to be physically present to complete the audit

AUTOMATION, ALERTS, & NOTIFICATIONS

Reordering - Receive automatic email notifications when consumables drop below the set reorder threshold

Create Alerts on Returns - Quickly add an alert to a fixed asset to create a notification that an action is needed, when, and add notes

Receipt Generation - Generate receipts from the issuance, return, and consumption, with optional email delivery, to quickly provide proof of the transaction

SEARCH, SORTING, & SCANNING TOOLS

Filtering & Sorting Products - Organize and narrow down results through sorting, filtering, and searching for both inventory and personnel

QR Code Scanning - Scan the QR codes on inventory and personnel credentials throughout the stages of the inventory process and access detailed equipment information pulled from SalamanderLive

Highlights of INVENTORY MANAGEMENT

Instant Visibility into your Inventory Levels

Easily see what fixed assets are available and view real-time quantities of consumables on-hand to make issuing assets even quicker

Issue, Return, and Manage Inventory to Anyone

Assign assets to anyone with a SalamanderLive credential, including users from other accounts, and easily manage all assigned assets in one location

Link Issuance to Events for Cost Distribution

Link active events to asset issuance to track cost distribution for after action reporting

Manage Unlimited Inventory Locations

Our scalable inventory management solution allows users to manage across single or multiple locations and issue / distribute inventory across them with ease

Get Notified on Inventory Transactions

Generate notifications and invoices as assets are issued and returned, creating a digital paper trail and notify the asset's contacts of any fixed asset status changes

Scan Personnel and Inventory QR Codes for Expediency

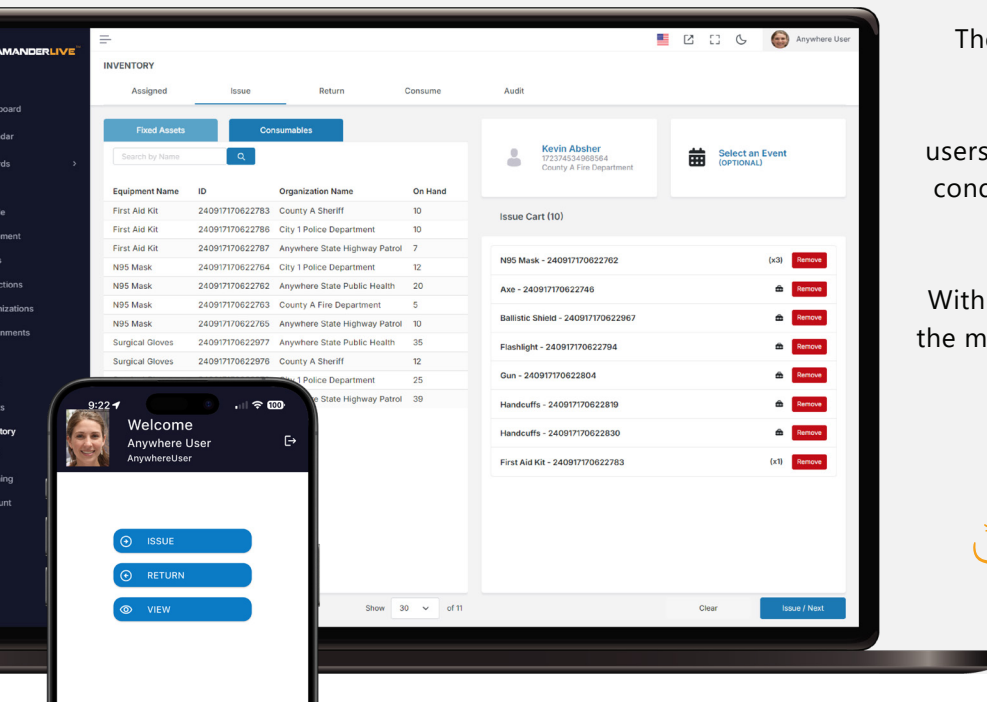

Use the mobile device's camera or handheld scanner with a computer to scan people and inventory to build the issue, return, and consume carts, while also enabling users to view inventory profile details, adjust consumable quantities, or change fixed asset statuses within the app

Two Interfaces to Best Suit Your Needs

Salamander provides two interfaces to help manage inventory. Using SalamanderLive, our cloud-based application, users can manage the complete process from identifying who has what (including people outside your account), completing the issuance, return, and consumption processes, accessing reports, and more.

The inventory app disconnects users from their computers, enabling issuing, returning, and auditing from anywhere. This mobility gives users the flexibility needed to move around while conducting audits and completing issuances and returns while on-scene.

With both interfaces, support fast scanning using the mobile device's camera or a handheld scanner connected to a computer.
