

ASSET & INVENTORY MANAGEMENT

Unified Intelligence For
Operational Precision

SalamanderLive™ centralizes your organization's equipment data in a secure, cloud-based application, giving you real-time visibility into every asset's location, status, condition, and custody. By maintaining accurate, up-to-date profiles and logging all activity as it happens, you gain complete lifecycle insight and eliminate uncertainty. Salamander's INVENTORY MANAGEMENT solution ensures you always know what you have, where it is, who has it, and what attention it needs.

ASSET CONFIGURATION & VISIBILITY

Control how assets are defined, organized, and seen across the system

IDENTIFICATION & TAGGING

Ensure assets are clearly labeled and easily identifiable

COMPLIANCE, AUDITING & QUALIFICATIONS

Support audits, certifications, and regulatory readiness

TRACKING, ALERTS & OPERATIONAL READINESS

Designed to help teams stay proactive and avoid missed actions

DOCUMENTATION & ACTIVITY HISTORY

Centralize records and maintain a clear history of asset activity

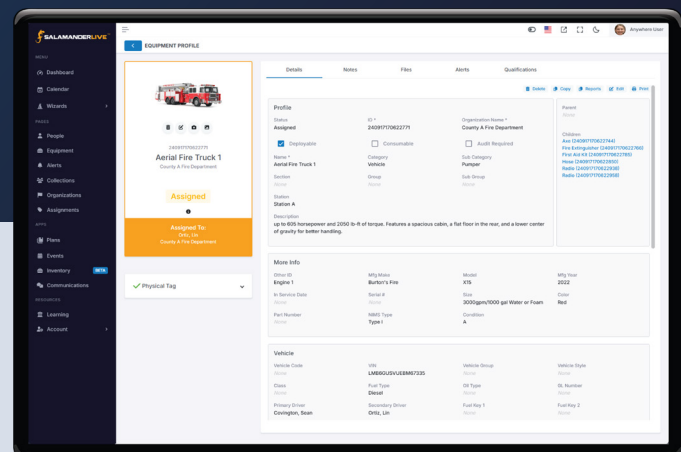

Top-to-Bottom Visibility Across Parent & Child Assets

With Salamander's organizational hierarchy, administrators can control exactly what level of visibility is required for their Account. When creating users, administrators can assign them to their organization and choose whether they should also see any child organization's data beneath it. For example, a local organization may only view equipment tied to its organization, while a State-level account can access equipment associated with the State (parent) as well as all associated organizations (children).

This structure allows visibility to be managed from the top-down, ensuring that each user sees precisely what they need to make informed operational and business decisions.

Dedicated Interface for DEPLOYABLE EQUIPMENT

Salamander offers a dedicated interface to view and request deployable equipment from your Organization or Account. When an event or incident occurs and assets need to be deployed quickly, all information is readily available to support rapid deployment. Our interactive map pins all deployable assets to give a clear visual of where equipment is located.

Smarter Tools for Total Inventory Visibility

INVENTORY MANAGEMENT

Manages Fixed Assets - Have full visibility of your fixed assets that can be managed within the mobile app or online

Track Consumable Stock Levels - Easily monitor consumable levels and quickly identify when items are running low

Consumable Consumption - Decrement consumption of consumables after usage to keep a true count of your consumable inventory

Status Adjustments on Returns - As fixed assets are returned, change their status if needed to indicate that the asset is missing or needs to be worked on

REPORTING, AUDITING, & VISIBILITY

Dashboard Interface - View assigned assets with filtering capabilities to see all assigned to active and inactive people as well as assets assigned to people from a different account

Advanced Reporting - Pull reports to see every inventory transactions including available, assigned, returned, consumed, event activity, receipts, auditing, and more

Mobile Physical Auditing - Auditing inventory through the mobile app allows a true audit to happen as you are required to be physically present to complete the audit

AUTOMATION, ALERTS, & NOTIFICATIONS

Reordering - Receive automatic email notifications when consumables drop below the set reorder threshold

Create Alerts on Returns - Quickly add an alert to a fixed asset to create a notification that an action is needed, when, and add notes

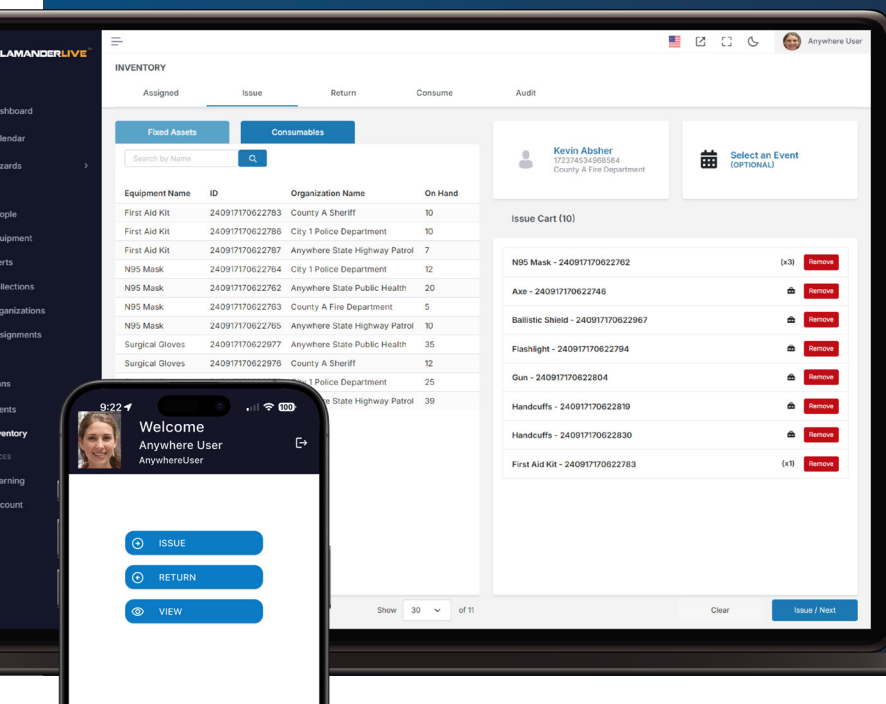

Receipt Generation - Generate receipts from the issuance, return, and consumption, with optional email delivery, to quickly provide proof of the transaction

SEARCH, SORTING, & SCANNING TOOLS

Filtering & Sorting Products - Organize and narrow down results through sorting, filtering, and searching for both inventory and personnel

QR Code Scanning - Scan the QR codes on inventory and personnel credentials throughout the stages of the inventory process and access detailed equipment information pulled from SalamanderLive

Two Interfaces to Manage Inventory

Salamander provides two interfaces to help manage inventory. Using SalamanderLive, our cloud-based application, users can manage the complete process from identifying who has what (including people outside your account), completing the issuance, return, and consumption processes, accessing reports, and more.
