

Incident Management

Always-On Situational Awareness

Managing resources effectively becomes absolutely essential when an event is underway. Salamander provides a comprehensive suite of tools designed to track and account for every critical resource including personnel, inventory, volunteers, mutual aid partners, patients, and more. Instead of relying on paper worksheets or multiple systems, we provide a digital, interoperable solution that gives real time visibility from the moment an event begins until it concludes. Pre-planning is just as important as real time management, and Salamander equips you with everything required to prepare with confidence. With pre credentialing resources and building structured plans, when the call comes in you will be ready to deploy without delay.

Built to Handle Any Situation

Large-Scale Accountability

Salamander delivers end-to-end incident management with full resource accountability throughout both planning and live operations. Field-ready and command-ready tools give you continuous visibility into who is on-scene, streamline coordination across agencies, and provide real-time data to support decisive incident command and accurate post-event reporting.

Every Call Accountability

Perfect for department calls of any type or size, every-call accountability puts you in control of incident tracking. With automated upfront accountability, integrating Salamander with CAD instantly triggers an event and key information becomes immediately available. Maintain interoperability across agencies in your jurisdiction to support a common operating picture.

Day-to-Day Accountability

Salamander delivers everyday accountability by tracking all resources in one unified system. Asset and inventory management keep equipment and supplies accurate and traceable, while visitor management logs who enters your facilities. Together, they provide a clear, real-time picture that strengthens operational control.

Key Highlights

Flexible Event Management

Manage and monitor events from the field or behind a desk with synchronized, real-time visibility.

- Two Interfaces (TRACK APP and SalamanderLive)
- Full Screen Incident Command View

Resource & Personnel Management

Scan a resource QR code to quickly view its details and assign it to an event, view planned personnel, and access an interactive event resource list.

- Roster
- Plan vs. Actual
- Quick Scanning

Verification & Accountability

Quickly verify identities, track accountability, and connect directly with dispatch systems for live incident awareness.

- Verification Scanning
- Real-Time PAR Counts
- CAD Integrations

Tracking, Mapping, & Timing

Track locations, set timers for personnel, and collaborate across agencies seamlessly.

- Mapping
- Resource Timer
- Event Merging

Financials, Reporting, & Documentation

Monitor costs in real time, generate reports, and store key documents for during and after the event.

- Rates Tracking
- Burn Down
- Reporting
- Event File Storage

Incident Structure & Visibility

Build and manage event hierarchies with clear, organized views to improve operational control and visibility.

- ICS Charting
- ICS Chart Tabs

INFORMATION

Mobile Management

(When Adding the TRACK APP)

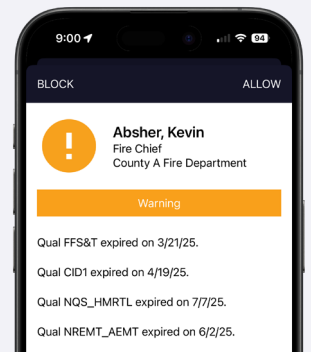

Take incident management into the field with the TRACK APP. All actions sync seamlessly with SalamanderLive, ensuring consistent visibility no matter what interface is used to manage the incident. From the app, start events on the spot and view event-wide and assignment-level PAR counts. Easily scan or manually add and move resources, including assignments, and indicate whether planned personnel check in on time or arrive late.

Identity Verification

(When Using the TRACK APP)

Each TRACK APP scan triggers a real-time validation with SalamanderLive, comparing five (5) key data points to confirm the authenticity of the TAG.

Real-Time Resource Location with Historical Tracking

(When Adding the TAG APP)

View the real time location of TAG APP users as soon as they join an event and are en route to the scene. The event map automatically updates the TAG APP user's pin, giving you true visibility into their movement and estimated arrival.
