

Pandemic Support For Better-Informed Decisions

Whether serving thousands or millions of citizens in your jurisdiction, Salamander provides safety measures by accurately and efficiently accounting for all testing and inoculations as well as accounting for the tools needed to provide such actions. Our accountability solutions allow for contactless interaction from start to finish, providing peace of mind for both civilians and personnel.

POD Setup & Management

Support POD setup, operations, and relocation with mobile accountability tools. Pre-assign and credential personnel, track arrivals and assignments, issue volunteer credentials at check-in, and synchronize data across accountability systems. Maintain real-time workforce visibility with live reporting and activity tracking.

PANDEMIC SUPPORT

Civilian Registration

Ensure that citizens can quickly move in and out of facilities to limit interaction with others while having minimal contact points. Quickly register civilians at the check-in station by entering their information, printing a credential and having it scanned to track the individual as they go through the testing or vaccination process.

Civilian Vaccination Management

Document vaccination information related to each dose a citizen receives. As clients are registered, use their civilian credential to scan them from one station to another throughout the vaccination process / POD. Create time and date stamps each time their credential is scanned. If there is a recall on a batch of vaccines, know who to contact and send out communication. When clients return for the second dose, confirm the manufacturer and date of their first dose.

STANDING **STRONG** TOGETHER

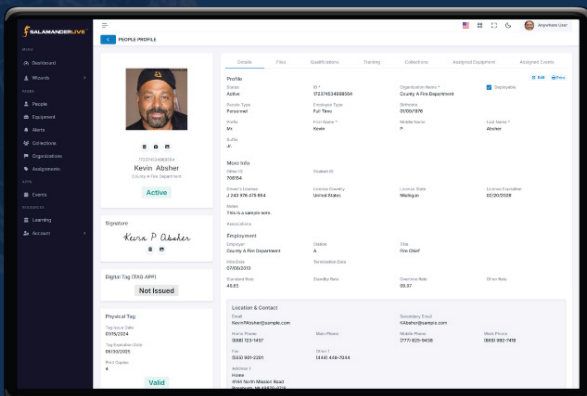

PPE & Vaccination Distribution Management

Demand is high for PPE & vaccinations during a pandemic and getting them to the proper distribution points is critical. Increase visibility to the supply chain within your jurisdiction with the ability to track when PPE & vaccines arrive, batch numbers, quantities, and distribution to other facilities. Gain real-time awareness of on hand quantities at all organization levels throughout your jurisdiction.

Vaccination Inventory Management

Knowing the available quantities of vaccinations within the distribution centers is important while having citizens await administration. With INVENTORY MANAGEMENT maintain real-time visibility on what vaccinations are on hand and what needs to be requested. As vaccinations are distributed to citizens, our system decrements the quantity on hand, in real-time, so you know when you are running low. Visibility on consumption can be seen from the parent level providing real-time data points.

Personnel Vaccination Management

Ensure your personnel are kept safe by accurately tracking their vaccinations all while capitalizing on your existing issued Salamander credential. Easily check vaccination status and timelines to reduce risk of exposure to those not yet vaccinated. Also, assure customers that vaccinations were complete with a touchless real-time interface.
