

DEPLOYABLE EQUIPMENT

SEE IT. FIND IT. REQUEST IT.

SalamanderLive gives organizations the power to activate the Deployable feature directly within each equipment profile. This simple toggle identifies equipment that is eligible for deployment and allows users to assign visibility at the Account or Organization level, ensuring the right people have access to the right resources at the right time.

When leveraged effectively, this feature becomes a game-changer: it increases awareness of deployable equipment, streamlines communication with clear contact details, and enables fast, efficient request coordination, helping your teams respond quicker when it matters most.

Visibility that Drives Action

SalamanderLive provides a clear, centralized view of all equipment marked as **Deployable - Account** or **Deployable - Organization** through the Deployable Equipment List.

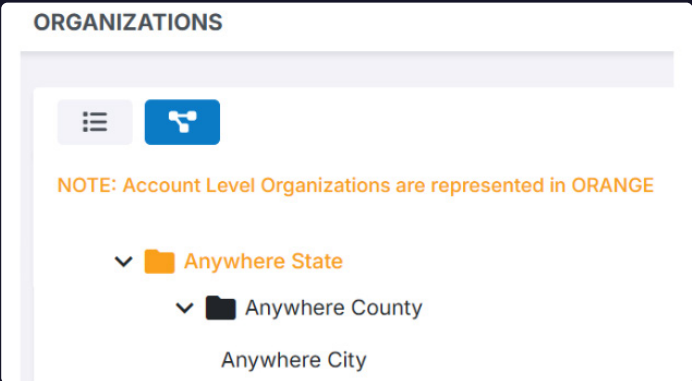

The screenshot displays the SalamanderLive interface for managing deployable equipment. The main view shows a list of equipment with columns for Name, ID, and Organization Name. A modal window provides a detailed view of a specific equipment item, including fields for Name, ID, Organization Name, Category, Sub-Category, Cost, Mileage, Model, and Contact information. The interface also includes a sidebar with navigation options and a map showing the location of the equipment.

Then use the interactive map to transform deployable equipment data into instant visual awareness. With a single click, see deployable equipment plotted on the map, giving you immediate geographic clarity when time matters most. Easily narrow your view to specific equipment and watch the map automatically zoom to what you need, helping you pinpoint resources faster and with confidence. Need the big picture? Expand to full-screen for maximum visibility and smarter, faster decision-making.

Setting up deployable equipment is quick and straightforward. Viewing the organizational hierarchy allows users to easily identify parent-child relationships, ensuring the correct organization is selected when enabling the Deployable feature. The example below highlights these components and illustrates how visibility is determined based on the selection made.

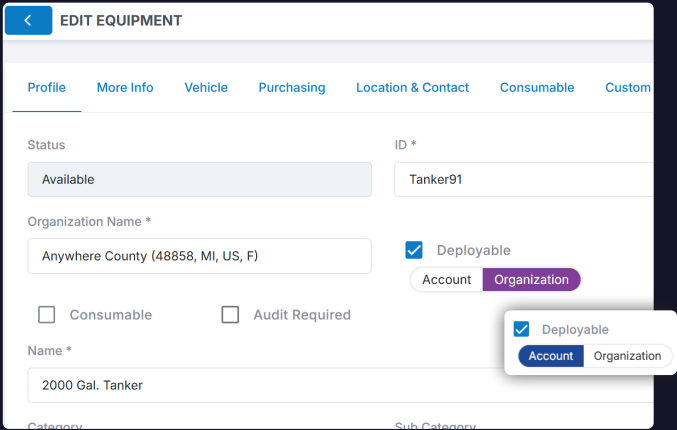

Organization Hierarchy

In SalamanderLive, easily distinguish between Account-Level Organizations (shown in orange) and Organization-Level Organizations (shown in black).

Deployable Equipment Toggle: Account vs Organization

When adding or editing equipment, use the Deployable toggle and select Account or Organization. Each option is color-coded for quick identification.

Bringing It All Together

Deployable Equipment selected to Organization will be viewable only by the Organization assigned to the equipment. Deployable Equipment selected to Account will be viewable by the Account and all Organizations (including any children).
