SALAMANDERLIVE™

Location Intelligence with ESRI ArcGIS

Quality mapping provides visibility to your resources to correctly place them in an event. With your existing ESRI subscription, you can have visibility to your SalamanderLive™ data, all on the same map. The Salamander generated feature layers, 'People', 'Assignments', and 'Assigned People', will give you complete visibility to your resource's location. You can access your plotted resource information within SalamanderLive as well as directly through your ESRI subscription.

SALAMANDER GENERATED LAYERS:

REAL-TIME DATA.
REAL-WORLD IMPACT.

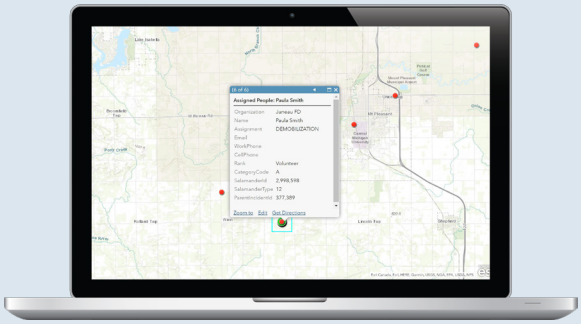

People Layer

As your event is in progress, observe your map as pins begin to appear while people join from the TAG APP and / or TRACK APP. TAG APP users provide location updates while en route. TRACK APP users populate a pin on the map with their GIS coordinates the first time they join the event. Pins are automatically removed when users leave the event, displaying only active or on-scene personnel.

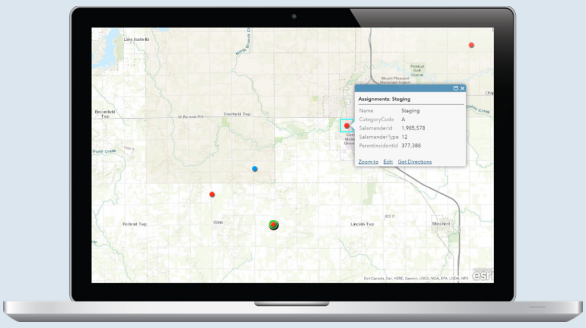

Assigned People Layer

Enable pre-planning by identifying expected responders for each assignment. Personnel can be checked in by scanning a credential or manual entry. As personnel check in, assignment-based pins appear on the map with their details and remain visible until check-out.

Assignments Layer

SalamanderLive captures the latitude and longitude for each assignment, so you know exactly where your assignments are located when looking at your map in ESRI. The pins in the Assignments layer remain stationary throughout the event.

Additional ESRI Mapping Features

CUSTOMIZE. VIEW. ANALYZE.
ALL IN ONE MAP.

The standard ESRI mapping features apply to the Salamander layers. Customize your map by changing the pin icon, color, and / or size for each layer. All plots are viewable in list form and broken out by category / layers.
